

Title: On Gossip in Hybrid Networks

Speaker: Christina Kolb

Hybrid communication networks have been investigated among others in [1] Competitive Routing in Hybrid Communication Networks, D. Jung, C. Kolb, C. Scheideler, J. Sundermeier, Algosensors 2018, where the aim is to calculate competitive paths between any two pair of network participants.

In our current research, we focus on spreading a certain amount of messages as fast as possible through the whole network. Hence in this talk, we present our first research ideas on gossip in hybrid networks. We are looking forward to fruitful discussions with the audience.
